JavaScript + DSA Interview Questions (1 Year Experience)

---

1. Var, Let, Const Difference:

- var → function scope, hoisting with undefined.

- let → block scope, TDZ.

- const → block scope, cannot re-assign.

2. Hoisting:

JavaScript execution before running code moves variables/functions to memory.

var = undefined, let/const → ReferenceError.

3. Callback Function:

A function passed as argument and executed later.

4. Promise:

Handles async operations. States: pending, fulfilled, rejected.

5. Async/Await:

Syntactic sugar over Promises.

6. Event Loop:

JS engine mechanism that handles async tasks.

7. Shallow vs Deep Copy:

Spread operator = shallow.

JSON.parse/stringify = deep.

DSA Questions

---

1. Reverse String
2. Largest Number
3. Palindrome
4. Count Character Occurrences
5. Remove Duplicates
6. Two Sum
7. FizzBuzz
8. Missing Number
